Metallic Foil Technical Data Sheet

Application

Metallic Foil is a polyester backed aluminium foil which can be heat transferred off the backing onto a garment / fabric.

Finish and Opacity

The Metallic Foil has an extremely shiny metallic finish which will completely block out the fabric underneath.

Printing

Before applying the Metallic Foil to a fabric, an adhesive has to be screened onto the fabric. The Metallic Foil will then stick to the adhesive but peel off the fabric where there is none. There are 2 types of Foil Adhesive, water based & plastisol. For information on how to apply the Metallic foil using a water based adhesive see the Technical Data Sheet for: Aqua Transfer Adhesive (GT1773) For information on how to apply the Metallic foil using a plastisol adhesive see the Technical Data Sheet for: Plastisol Foil Adhesive. (PM1500)

Standard Packaging and Storage

The Metallic Foil is supplied on a roll, 25 metres long and 30.5cm wide. The rolls of foil should be kept in dry conditions at room temperature. Metallic Foils are supplied in the following colours: Blue, Red, Green, Black, Silver, Gold, Copper and Refractive.
